A FOREWORD

The present collection made by Messrs. Yamanaka and Company consists solely of ancient Chinese ceramics of the Ming, Yuan, Sung, T'ang and Han dynasties. It may be said that nothing has been included in this gathering which could be attributed to a later period than the Seventeenth Century; possibly three examples might touch the border line of the closing years of the Mings. The remaining objects possess the characteristic qualities which place them within earlier periods.

It is confidently hoped that such an exhibition will be of exceptional interest when presented to the patrons of the American Art Galleries, and it may be conceded that this is the first important collection of such character to be offered at public sale. Doubtless many visitors will be reminded of the instructive loan exhibition held last year at the Burlington Arts Club in London, and of the interesting loan exhibition held in Paris, at the Louvre, under the auspices of the Société des Arts Decoratifs, when only Ming, Yuan, Sung, T'ang and Han art was exposed for comparative study.

In this brief introductory, reference should specially be made to the important Han and T'ang potteries which comprise large and small mortuary images and other figures, some of which have been termed "Han-Tanagras," owing to the remains of color pigments and earthy incrustation. The many striking examples to be noted here make us marvel at the art which those early potters exercised in their broadly idealized work. We see both force and truth in the rendering of man, animal and fowl alike; all have that peculiar decorative vigor which appeals to the keen student and collector. Time,

too, has invested the glazes with mellow and iridescent tones; thus these early creations of simple clay have been converted into fitting treasures for cabinets and the *desiderata* of museums the world over.

The Chinese have been potters since pre-historic ages, claiming the invention of the potters' wheel, which claim many Western authorities are inclined to admit; among these, one French writer attempts even to trace the route by which it may have reached Egypt. The wheel was probably known to the Egyptians during the middle of the third millennium or about 2,500 years before the Christian era, and the Chinese attribute the invention to the fabulous era of Huang-Ti, whose reign is carried back to the beginning of their cyclical system of chronology that corresponds in our reckoning to 2637 B. C.; therefore, it may be conceded that the objects from the far East under consideration here fairly rank in archæological interest with the examples found in ancient Egyptian tombs.

A group of interesting ancient bronzes has also been added, which in part belongs to the same remote dynasties. Some reach even beyond the Han era, as indicated by their descriptions.
